

"When everyone is included, everyone wins"

- Jesse Jackson -

We use artificial intelligence technology to help individuals who are hearing impaired visually impaired, and those facing social communication difficulties to live more independently and confidently.

[Explore AI Tools](#)[Learn More](#)

Tools

Sign Language

An AI system that recognizes sign language and converts it into text or speech, helping the hearing impaired communicate more easily with others.

[Use Now](#)

Color Detection

A tool that identifies and describes colors through images or a webcam, assisting those with color blindness and visual impairments in recognizing colors in daily life.

[Use Now](#)

Emotion Recognition

Technology that analyzes and recognizes emotions through facial expressions, supporting individuals who have difficulties with social communication and emotional recognition.
